

MICHAEL VOGT

Sugar Grove, IL 60554 | 312-772-4762 | mvogt99@gmail.com | linkedin.com/in/mike-vogt-analytics

PRINCIPAL IT SOLUTIONS DATA ARCHITECT

Professional Summary

Principal data architect and enterprise architecture leader with 20+ years designing, governing, and scaling cloud-native data platforms across AWS, Azure, and GCP for healthcare, financial services, supply chain, manufacturing, and regulated enterprise environments. Defines enterprise data architecture roadmaps, canonical domain models, data product patterns, reference architectures, data contracts, event-driven ingestion, governed analytics consumption, and AI-ready data platforms. Architected Databricks/Unity Catalog and Delta Lake patterns, AWS event-driven lakehouse platforms with Apache Iceberg table format and catalog patterns, and Data as a Product capabilities spanning batch, streaming, BI, analytics, data science, and ML/AI workloads. Proven executive advisor and hands-on architecture leader who translates business outcomes into clear architecture options, cost/risk trade-offs, standards, roadmaps, and senior stakeholder presentations. Built and scaled three data/architecture practices, led distributed teams of 50+, managed \$5M+ platform budgets, and coached 40+ engineers and architects into senior roles.

Core Competencies

Cloud/Data Platforms	Data Architecture & Modeling	Data Governance, Security, Analytics, AI & Collaboration
Databricks Data Components Delta Lake Databricks Workflows SQL Warehouses Delta Live Tables Pattern AWS Auto Loader Pattern Design AWS Data Components S3 / Glue / Lambda / Athena / Redshift EMR/MSK Pattern Evaluation Step Functions CloudWatch IAM SAP Components HANA / SAP BW/ERP Model Alignment / SAP Extraction Pattern Awareness (ODP/SLT /SDI/CDS Views) Oracle Components Oracle Financials	Architecture Enterprise Data Architecture Data Products Data Mesh Design Bronze/Silver/Gold Medallion Data Products Transactional/ODS/Data Mart Ingestion/Consumption Patterns File API CDC Streaming Kafka Kinesis Canonical Domain Models Supply Chain Healthcare (Payor / Provider) Insurance (Commercial Lines/ Life Finance (AP/AR/GL)	Data Governance Lineage Data Classification Data Quality Data Observability Privacy /Retention / Audit FinOps Guardrails Security RBAC/ABAC PII Controls Masking/Tokenization Analytics Reporting and BI AI Vector Search Semantic Search RAG-Enabled Data Products Collaboration Architecture Review Boards Engineering Coaching Data Science Collaboration

Professional Experience

AHEAD | Chicago, IL | 2023 - Present

Principal Technical Consultant

Lead enterprise data architect and consulting advisor designing governed cloud data platforms, event-driven integration architectures, canonical data models, and AI-enabled consumption patterns for healthcare, PBM, specialty healthcare, and manufacturing clients. Partner with executives, engineering, analytics, security, governance, and business stakeholders to translate capabilities into roadmaps, reference architectures, data product designs, and delivery standards.

- Led greenfield enterprise data platform architecture for a healthcare provider serving 10,000 customers; architected Databricks/Unity Catalog environment with Delta Lake patterns, data governance, modeling standards, notebook-scale data engineering, quality controls, access design, and governed analytics consumption from inception through production.
- Designed Databricks and custom configuration-driven DSL architecture for healthcare provider platform modernization; assessed OneLake storage, pipeline orchestration, Power BI Premium, Databricks Lakehouse patterns, migration paths, and enterprise readiness through formal architecture decision records.
- Architected configuration-driven, event-driven AWS data integration platform for a PBM client serving 3 healthcare clients across 4 domains and 20+ source systems; defined a multi-stage pipeline processing 500K+ records per delta file with Apache Iceberg, Collibra Data Quality, AWS Athena, Snowflake consumption, and metadata-driven canonical mapping across claims, pharmacy, eligibility, drug, and finance domains.
- Established canonical model and data product decomposition patterns covering core data products, use-case data products, data producers, consumers, consumables, source-to-target mappings, and freshness/quality/cost SLOs; unified engineers, architects, product owners, product managers, and business leaders around a shared operating model for governed delivery.
- Designed enterprise data platform architecture for a global manufacturing client across labels, packaging, product, supply chain, commercial, analytics, reporting, operational data products, and digital application consumption.
- Defined AI-ready data architecture using RAG-enabled data products, vector/semantic search patterns, LLM-friendly schema design, governed tool-callable services, reproducible data pipeline designs, and data governance so AI agents and data science teams could consume trusted data without bypassing controls.

- Directed governance and security standards covering metadata management, lineage validation, Colibra DQ, incident-management thinking, FinOps guardrails, access controls, secrets/token handling, CI/CD-style development/UAT/production promotion, and compliant data lifecycle gates.
- Coached cross-functional data engineers and architects through architecture trade-offs, modeling standards, governance-by-design practices, AI architecture patterns, executive-ready options, implementation roadmaps, and high-visibility stakeholder presentations.

PRICEWATERHOUSECOOPERS (PwC) | Chicago, IL | 2020 - 2023

Director, Advisory, Data Architecture

Chief architect directing enterprise Data as a Product capability with a distributed global team of 50+ and \$5M+ budget. Owned architecture strategy, canonical modeling patterns, platform roadmap decisions, standards, and stakeholder alignment across partners, senior managers, engineers, and client teams.

- Originated canonical data model framework through a water-distribution engagement; modeled orders, products, shipments, finance, AP/GL, SAP HANA, and Oracle Financials domains, then expanded the framework into PwC's firm-wide Data as a Product platform.
- Designed hyperscaler-agnostic platform spanning Azure, AWS, and GCP using shared configuration metadata, canonical models, reusable source-to-target mappings, governed data product patterns, and repeatable ERP/CRM accelerators across SAP HANA, Oracle Fusion, Salesforce, and analytics consumption layers.
- Drove platform from concept to internal MVP pilot; presented architecture vision, delivery options, cost/risk trade-offs, governance implications, and data quality expectations to partners and senior stakeholders.
- Defined reusable reporting, BI, analytics, semantic, and data science consumption patterns so governed domain data products can serve operational and executive decision-making without duplicating source integration work.
- Led post-acquisition TSA exit data platform architecture for a water distribution company; diagnosed risk in heterogeneous source systems and drove consensus around open canonical modeling, cloud data platform patterns, and governed source integration.
- Developed offshore and client-facing engineers into design leaders through architecture review, modeling standards, reusable patterns, and progressive ownership of data product design.

SPR CONSULTING | Chicago, IL | 2018 - 2020

Executive Director, Data, Analytics and Machine Learning

- Built data and analytics practice from zero to \$4.5M revenue in under 3 years; delivered event-driven cloud data platforms on Azure and AWS and created a Cloud Data Platform Accelerator that reduced client startup costs 40%.
- Directed AWS event-driven platform for a marketing technology client; governed architecture for scalable integration, analytics consumption, operationalization, and reusable IP delivery.
- Increased profitability by 40% and by capacity 300% in under 1 year through modern data platform adoption, service portfolio design, and consultant capability development.
- Developed engineers with limited cloud experience into client-facing consultants on Azure and AWS through certification paths, architecture mentoring, delivery templates, and reusable accelerators.

Capgemini/Sogeti | Senior Manager | 2017 - 2018

- Modernized enterprise data integration from on premises to cloud for a large enterprise client; designed Azure data platform architecture for including integration, infrastructure, security, and future platform extensibility across onshore/offshore teams and budgets of \$4M.

NVISIA | Director, Data Architecture Management | 2012 - 2017

- Created and led the company's first Data Practice; grew Data/Analytics and first Machine Learning service offering to \$3M with 40% profit margin, reduced engagement costs 15% through reusable assets, and increased annual revenue \$1.5M through enterprise data management and BI/data warehouse services.
- Led healthcare and insurance data architecture work including canonical data models and governance frameworks for trusted claims, policy, and underwriting data; directed BI/data warehouse assessment for a global medical supply manufacturer.

PSC Group | Vice President, Practice Lead | 2005 - 2012

- Directed 4-year enterprise data management/data platform engagement at a global futures clearing merchant; built canonical data models for financial instruments and contracts supporting worldwide front, middle, and back-office operations with millions of transactions per session.
- Launched Open-Source Application Development practice from zero to \$2M and formalized coaching model for mid-level architects and senior engineers.

Earlier Career:

Senior Technical Architect, HCSC - healthcare enterprise data and integration architecture.

Senior Rules Engine Architect, Kemper Insurance - enterprise rules engine and data architecture for regulated policy administration workloads.

Technical Skills

Category	Technologies & Tools
-----------------	---------------------------------

Data Platforms & Cloud	Databricks (Unity Catalog, Delta Lake, Lakehouse, SQL Warehouses, Workflows, Delta Live Tables, Auto Loader) Microsoft Fabric Snowflake AWS (S3, Glue, Lambda, Athena, Redshift, CDK, IAM, Step Functions, CloudWatch, EMR/MSK) Azure (Data Factory, Synapse, Event Hub, Purview)
Data Engineering & Integration	Apache Spark, Spark Streaming, Apache Iceberg Airflow, MuleSoft, Informatica, Datastage, SSIS, ODI, Tibco, Talend CDC (Change Data Capture), API/file ingestion, Kafka, Kinesis Data mesh, Data as a Product
Data Governance & Security	Collibra Data Quality & Observability Metadata management, lineage, classification, retention, audit RBAC/ABAC, masking/tokenization, FinOps guardrails
Data Modeling & Domains	Canonical data models, domain models, 3NF, dimensional modeling Data product contracts Supply chain, finance, AP/GL, orders, shipments, claims, pharmacy, eligibility SAP HANA, SAP BW/ERP (ODP/SLT/SDI/CDS view), Oracle Financials, Oracle Fusion, Salesforce, Guidewire
AI, Analytics & Reporting	Data science collaboration, RAG (Retrieval Augmented Generation), vector search, semantic search, knowledge graphs LLM data infrastructure, governed AI agents Power BI, Tableau, reporting platforms Model lineage, reproducibility patterns, CI/CD governance for data and AI workloads

Education & Professional Development

ME, Concurrent Design Management - Stevens Institute of Technology

BS, Marine Engineering Systems - United States Merchant Marine Academy

Essentials of Executive Leadership - Booth School of Management, University of Chicago
